Substrates

Concrete floors
Timber floors

Resin dispersion to fortify cement flooring compounds

Description

A synthetic resin additive that is added to levelling/repair compounds to improve the mechanical properties.

Uses

Improves the elasticity, bond strength and abrasion resistance when added to levelling/repair compounds to:

- Level rigid timber floors
- Repair heavily walked/trafficked areas i.e. stair treads
- Add to levelling compound before overcoating flexible flooring systems
- Cover underfloor heating with screeds or levelling compounds

Dosage

Add approximately 20% more **Elastabond** than stated volumes of water and adjust to user's preference.

Mixing

Shake well before use and mix with the required product in place of water.

Application

Apply in accordance with the direction of normal application procedure of the product being used.

Heated Floors

When applying over underfloor heating, turn heating off for 48 hours before screeding. Let the screed cure for 48 hours for 5mm and 96 hours for 10mm, before gradually bringing back to the operating temperature.

Shelf Life

2 years
